## PFAS - Update on New Analytical Offerings

The widespread use of PFAS (Per- and Polyfluoroalkyl Substances) during the past 70 years has led to large-scale releases into the environment. At ALS we recognise that we need to ensure that we are exploring contemporary techniques and methods to test for PFAS across a range of different matrices to keep up with the pace of PFAS testing requirements.

ALS Hawarden have been busy over recent month expanding our analytical offering to not only offer a more comprehensive PFAS suite on standard soils and waters, but also to explore how we can support our clients in applying the latest techniques on a range of different matrices. Current offerings include but are not limited to the following.

- **PFAS-47 Suite on waters**
- **PFAS on AFFFs and Firefighting Foams**
- **PFAS on Concrete (including cores)**
- **PFAS on Swabs**

We are also now pleased to announce a new dedicated PFAS support service to handle all your bespoke PFAS requests. Please do not hesitate to contact the PFAS working group email below who would be happy to discuss any requirements with you. We have industry-leading experts ready to support any technical queries you may have. Email: [pfas.hawarden@alsglobal.com](mailto:pfas.hawarden@alsglobal.com)

Expect to hear more about the offerings above over the coming weeks through new communications from ALS, but in the meantime, we are encouraging all clients to come and speak to us about your PFAS requirements and projects to see if we can support you.
